LANGUAGES

German — Native

English — Fluent

CORE SKILLS

POLARION & ALM

Polarion ALM · CI/CD Pipelines · Risk Management

ENGINEERING

Java · Spring Boot · TypeScript · JavaScript · Python · C#

AI & PROCESS

AI Tooling & Agents · MCP Servers & APIs · Requirements Engineering · Scrum & Agile

AVAILABILITY

Available from 01/2027

Rate on request

PERSONAL

HOW I WORK

- Digital nomad, based in Germany
- Works effectively from anywhere in the world

HOBBIES

- CrossFit & endurance sports
- Travel & discovering new cultures
- Photography

Phillip Bösger

Polarion Expert, AI & Full-Stack Developer

8+ Years with Polarion ALM

2–3× faster delivery with AI

Days not weeks to get up to speed

PROFILE

I've spent eight years with Polarion — growing from building the first custom extensions to running AI-automated delivery pipelines, with deep roots in medical device projects and requirements engineering. I take problems through to working software: I find out what the client actually needs, define the right approach, and build it clean, tested and documented. The same quality would be possible without AI, just at two to three times the time. With AI I run parallel workstreams, hold higher test and documentation quality, and keep full oversight.

WORK EXPERIENCE

Freelance Developer, Consultant & Trainer — 01/2026 – Present

Self-employed (Bösger Digital) · Germany (remote)

StackFuel GmbH · Course author, AI-assisted coding — 10/2026 – 12/2026

- Design and write a self-paced online course that teaches technical B2B teams to code with AI agents (OpenAI Codex): lessons, hands-on exercises and knowledge checks.

avasis solutions GmbH · AI enablement & coaching for Polarion development — 05/2026 – 06/2026

- Coached Polarion plugin developers on the job in AI-assisted development across the lifecycle (concept, root-cause analysis, MCP-based implementation, documentation, tests), with training material on my AI Enablement Hub.

avasis solutions GmbH · Polarion plugin development — 01/2026 – Present

- Build custom Polarion extensions from spec to production: Java, REST, Velocity, workflow scripts, CI/CD with automated release documentation.
- Built avaCopilot from scratch: an AI copilot inside Polarion that drafts documentation, flags review issues and untangles requirements in real time.

Senior Software Developer — 03/2024 – 12/2025

avasis Solutions GmbH · Nuremberg

- Built Polarion extensions across the full lifecycle — from Java, REST and Velocity to workflows and reporting — owning delivery end to end from intake to release.
- Embedded LLMs and AI agents into the team's daily workflow, enabling parallel workstreams and raising the quality of review, documentation and testing.
- Automated CI/CD pipelines end to end with quality gates and release documentation for consistent, reliable delivery.

Technical Development Lead — 05/2022 – 03/2024

avasis solutions GmbH · Nuremberg

- Led a team of six building custom Polarion extensions, running the full lifecycle from requirements intake through go-live.
- Owned planning, architecture, QA, release and maintenance, and kept delivery predictable as client requirements evolved.
- Advised enterprise clients on Polarion architecture, listening to the real problem and proposing the solution that actually fit.

ALM Consultant — 11/2020 – 05/2022

avasis solutions GmbH · Nuremberg

- Led client projects end to end in medical device development, from initial requirements through delivery and ongoing expansion.
- Designed and built a complete licence management service inside Polarion from scratch, covering creation, tracking and administration in one solution that simply didn't exist before.
- Built an interactive, Excel-like table component for Polarion — genuinely hard to pull off inside a rigid ALM platform and one of the more ambitious things I've shipped there.

PLM Consultant — 09/2018 – 11/2020

Atos · Fürth

- Built Java plugins and widgets in Polarion ALM for Siemens, taking early technical ownership of genuinely complex extension work.
- Set up test automation from the ground up and served as Scrum Master alongside my development work.

Dual Study – Applied Computer Science — 09/2015 – 09/2018

Atos · Fürth

- Built foundational tooling for process automation, data extraction and test automation in a real Polarion environment.
- Bachelor's thesis: reference modelling for large-scale Scrum project organisation using Polarion.

EDUCATION

M.Sc. Computer Science — 2022

TH Georg Simon Ohm University of Applied Sciences, Nuremberg · GPA 1.6

B.Sc. Computer Science — 2018

DHBW University of Cooperative Education, Mannheim · GPA 1.9

Dual study · Atos · Thesis: reference modelling for large-scale Scrum project organisation using Polarion
